

PHONE SYSTEMS

For a more efficient
and productive
business

PRO**STHERE**

A Michody Company

Features Include:

Modern phone systems provide many features to help make your business more efficient and productive. Utilizing **VoIP (Voice over Internet Protocol)**, you can easily create extensions, call queues, set up voicemail and much more. You don't even have to be in the same building as your phone users, making it ideal for work-from-home employees or businesses with multiple locations. All of this is available at a fraction of the price of a traditional PBX phone system.

VoIP phone systems run across the internet, allowing you to use your existing internet connection to carry your voice signal. Because of this, adding a new phone line is quick and simple. No appointments are needed to run a new physical phone line to your building. With a few clicks, your new phone line is set up and ready to go.

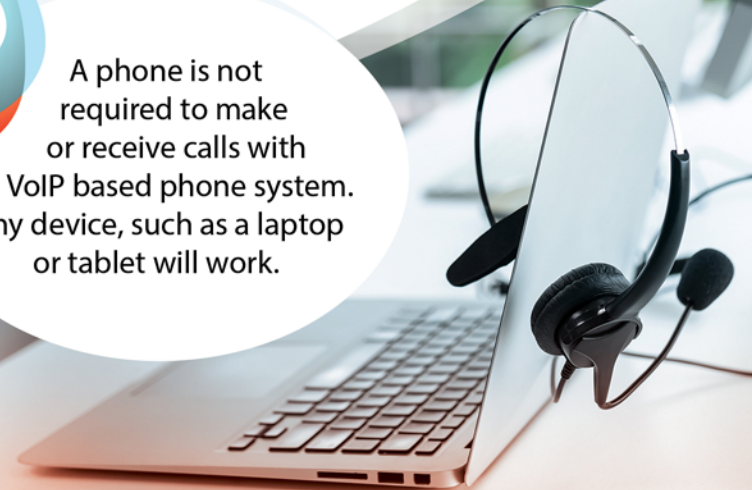

An auto attendant (or digital receptionist) mixed with on hold music can give your company a more professional look. Plus, custom messages can be added to your music on hold to advertise your products and services, helping to generate customer interest.

- Blind/Attended Transfer
- Queues
- Music on Hold
- Recording
- Web Client
- Intercom/Paging
- Voicemail
- Individual Extensions
- Call Parking/Pickup
- Auto Attendant
- Busy Lamp Field (BLF)

Did You Know?

A phone is not required to make or receive calls with a VoIP based phone system. Any device, such as a laptop or tablet will work.
